TO ALL TO WHOM THESE PRESENTS SHALL, COME:

Research Seeds, Inc.

MICCOS, THERE HAS BEEN PRESENTED TO THE

### Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED DISTINCT VARIETY OF SEXUALLY REPRODUCED, OR TUBER PROPAGATED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF TWENTY YEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLENISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE CHT TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR DRITING IT, OR EXPORTING IT, OR CONDITIONING IT FOR PROPAGATION, OR STOCKING IT FOR ANY OF THE PURPOSE, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PARTY THE PLANT VARIETY PROTECTION ACT. (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

ALFALFA

'WL 442'

In Testimony Marrot, I have hereunto set my hand and caused the seal of the Plant Arrichy Arotection Office to be affixed at the City of Washington, D.C. this eighth day of May, in the year of our Lord two thousand one.

Clark for

Acting Commissioner Plant Variety Protection Office golary of Agriculture

### Exhibit A

#### Origin and Breeding History of WL 442

WL 442 is a 167-plant synthetic variety resulting from phenotypic recurrent selection for resistance to Verticillium wilt. Source material traces to two elite experimental lines selected for resistance to Phytophthora root rot. Parental germplasm traces to WL 457 (50%), WL 512 (30%), WL 450 (10%), and WL 504 (10%). The 167 parental selections were grown in an isolation cage at Warden, Washington. Breeder (Syn 1) seed was bulked (all seed from all plants) following harvest in 1997.

#### Type and Frequency of Variants

No variants are recognized in WL 442 beyond the limits given in Exhibit C.

### Evidence of Uniformity and Stabilty

We have observed stability and uniformity in essential and distinguishing characteristics (e.g. disease resistance, fall dormancy, flower color) between the Syn 1 and Syn 2 generations of seed increase. WL 442 is as uniform as other alfalfa varieties previously accepted by State seed certification programs.

### Exhibit B

### Statement of Distinctness for WL 442

WL 442 is an intermediate dormancy (Group 7) variety that possesses superior pest (disease, insect, nematode) resistance, higher hay yield potential and greater persistence when compared to other alfalfa varieites with similar adaptation.

WL 442 is most similar to WL 457, without qualification. Looking at overall plant color, regrowth after cutting, fall dormancy and insect and nematode resistance suggests that WL 442 and WL 457 are very similar. However, there are signficant differences in disease resistance between these two varieties that indicate that WL 442 and WL 457 are different. WL 442 is resistant to bacterial wilt (Table 2); WL 457 is moderately resistant to this disease. WL 442 is highly resistant to Verticillium wilt (Table 3); WL 457 displays low resistance to this disease. Finally, WL 442 is highly resistant to anthracnose (Race 1) (Table 4); WL 457 displays low resistance to this disease.

There are three additional alfalfa varieties which are similar to WL 442: WL 414, Parade and Sutter. However, distinct and significant differences exist between WL 442 and each of these three varieties.

WL 442 is similar to WL 414. However, WL 442 is a Group 7 dormancy variety (Table 1); WL 414 is a Group 6 dormancy variety. In addition, WL 442 displays high resistance to Verticillium wilt (Table 3); WL 414 is resistant to this disease.

WL 442 is also similar to Parade. However, WL 442 is resistant to bacterial wilt (Table 2); Parade is moderately resistant to this disease. In addition, WL 442 is highly resistant to the blue alfalfa aphid (Table 5); Parade is resistant to this insect pest.

WL 442 is also similar to Sutter. However, WL 442 is highly resistant to Verticillium wilt (Table 3); Sutter displays low resistance to this disease. Finally, WL 442 is highly resistant to the blue alfalfa aphid (Table 5); Sutter is moderately resistant to this insect pest.

### Table 1 > Fall Dormancy Reaction\* - Bakersfield, CA (1998)

Date Last Cut 9/26/98

Date Regrowth Scored 10/29/98

Entry (Dormancy Group)	Fall Height <u>(Inches)</u>
Archer (5)	14.0
WL 414	16.5
ABI 700 (6)	17.1
Dona Anà (7)	19.4
WL 442	20.3
Pierce (8)	22.5
Mean (all entries)	19.3
LSD (.05)	1.94
CV (%)	6.76

<sup>\*</sup>Fall dormancy was measured as natural plant height in a space-planted, four-replicate trial with approximately 45 plants/entry/replicate.

Table 2 > Bacterial Wilt Resistance\* - Evansville, WI (1998)

<u>Entry</u>	Unadjusted % <u>Resistance</u>	Adjusted % <u>Resistance</u>	<u>A.S.I.</u>
WL 442	46	44	2.2
Vernal (R)	44	42	2.3
WL 457	25	24	3.1
Parade	24	23	3.1
Sonora (S)	1	1	4.3
Mean (all entries)	32		2.6
LSD (.05)	10		0.3
CV (%)	12		8.9

<sup>\*</sup>Data obtained from a 3-replicate space-plant field nursery with approximately 75 plants/entry/replicate. Plants were scored on a 0-5 scale where 0 and 1 are resistant and 5 is dead.

Table 3 > Verticillium Wilt Resistance\* - Evansville, WI (1998)

Entry	Unadjusted % <u>Resistance</u>	Adjusted % <u>Resistance</u>	<u>A.S.I.</u>
Oneida VR (HR)	57	60	2.3
WL 442	55	58	2.3
WL 414	34	36	3.0
WL 457	13	14	3.7
Sutter	10	10	3.9
Saranac (S)	5	5	4.3
Mean (all entries)	31		3.3
LSD (.05)	9		0.2
CV (%)	24		6.1

<sup>\*</sup>Data obtained from a 4-replicate growth room cone test with approximately 75 plants/entry/replicate. Plants were scored on 1-5 scale; 1 and 2 are resistant and 5 is a dead plant.

Table 4 > Anthracnose (Race 1) Resistance\* - Evansville, WI (1998)

<u>Entry</u>	Unadjusted % <u>Resistance</u>	Adjusted % Resistance
Arc (HR)	60	65
WL 442	54	59
WL 457	10	11
Saranac (S)	1	1
Mean (all entries)	25	
LSD (.05)	8	
CV (%)	23	

<sup>\*</sup>Data was obtained from a 4-replicate greenhouse flat test with approximately 50 seedlings/entry/replicate. Percent resistance was based on % seedling survival.

## Table 5 > Blue Alfalfa Aphid Resistance\* - Bakersfield, CA (1998)

Entry	Unadjusted % <u>Resistance</u>	Adjusted % <u>Resistance</u>	<u>A.S.I.</u>
WL 442	56	64	2.3
Cuf 101 (R)	48	55	2.6

### **Additional Description of Variety**

WL 442 is a very high-yielding, intermediate dormancy (Group 7) alfalfa variety adapted for hay, green chop and dehydration uses in the southwestern United States. WL 442 displays superior disease, insect and nematode resistance and greater persistence when compared to other alfalfas with similar fall growth and adaptation.

WL 442 also displays superior forage quality (% crude protein, % TDN (total digestible nutrients) % RFV (relative feed value) when compared to competitive varieties (see below).

# Forage Quality\* - Lodi, California (1999) Test Seeded October 1998

Entry	% Crude <u>Protein</u>	% <u>TDN</u>	Relative <u>Feed Value</u>
